

- Slides state that users will not have to pay until they actual go and pick up the food but I disagree with this. What if someone places an order but never comes to pick up their food? The cafeteria staff will just be waiting to give the food for the correct person but if that person never shows up that food may go wasted because people may not want to buy food that has been sitting around for a long time. I think the options here are either to pay once you pick up the food but with this plan your food becomes purchasable by other people if you don't arrive to pick up your order within your 15 minutes window or you pay ahead of time and if some unforeseen event happens where they haven't prepared your food for some reason you get refunded.
- I feel like 2 item purchase limit should be specified to a 2 hot bar item limit because what if someone want a drink and bag of chips to be part of their pick up order but can't because of the item limit? This is why I think the strict item restriction should be placed on actual hot bar/cooked meal items and up to an addition 3 packaged/bottled items can be included in your order so you don't have to enter the cafeteria after picking up your hot bar order.
- It is stated that you have to be one of the first 20 people to place an order for a given time slot to prevent long pick up lines. In the image demonstrations the time slots seem to be 15 minutes long. Since most people need to buy lunch within the first 30 minutes to have time to eat that would mean during lunch there are only 40 people max who are able to put their order in ahead of time. Even though this would reduce pick-up lines which was something I wanted clarification on I don't think 40 people picking up their orders would really reduce the line problem during the lunch rush. Many people already basically just pick-up grab and go lunches and just leave but here is still a long lunch line. With there being 3 grades with around 300 people per grade plus staff, I don't think the people limit will help with lunch lines very much.
 - Also I was wondering if there could be more clarity for where the pick-up area would be because it says that cafeteria staff will make sure the correct people pick up their food but the cafeteria staff are in the cafeteria so would the pick-up line be added to the regular lunch line resulting in no line change at all?
- I think it could also be a good idea to merge Chase's calorie app idea with this app because it would be easy and useful to list calorie counts under listed items that are visible while people are ordering.
